SUMMARY

Final-year B.Tech Computer Science Engineering student with hands-on experience in frontend and full-stack web development. Skilled in building responsive, scalable web applications using Next.js, React, TypeScript, JavaScript, Python, Flask, Express.js, and PostgreSQL. Experienced in developing production-ready applications, integrating REST APIs, implementing authentication, and deploying projects using Docker, Vercel, and Railway. Passionate about creating intuitive user experiences and writing clean, maintainable code while collaborating effectively in team environments.

EDUCATION

SCMS School of Engineering and Technology (KTU)

Bachelor of Technology (B.Tech) – Computer Science & Engineering

Expected Graduation: 2027

PROJECTS

CineVerse – AI-Powered Movie Discovery Platform (In Progress) | Next.js | TypeScript | Express.js | FastAPI | PostgreSQL | Redis | Docker

- Developed a full-stack movie discovery platform using a microservices architecture.
- Built a responsive frontend with Next.js, TypeScript, and Tailwind CSS.
- Implemented JWT authentication, user profiles, favorites, watchlist, and movie review functionality.
- Integrated TMDB APIs through secure backend services and RESTful APIs.
- Containerized the application using Docker and Docker Compose for efficient development and deployment.

QiQi Store – Fashion E-Commerce Platform | Next.js | TypeScript | Tailwind CSS | Framer Motion | Razorpay

- Built a production-ready e-commerce application with a modern, responsive user interface.
- Implemented product search, filtering, wishlist, shopping cart, and checkout functionality.
- Integrated Razorpay payment gateway for secure online transactions.
- Enhanced user experience with smooth animations and optimized page performance.
- Deployed the application on Vercel.

ExamMark Portal – School Examination Management System | Python | Flask | SQLite | HTML | CSS | JavaScript

- Developed a web application for G.H.S.S. Edavilangu to manage student examination records.
- Designed responsive dashboards for teachers and administrators.
- Implemented role-based authentication, grade management, and CSV export functionality.
- Maintained and improved the application based on real user feedback after deployment.
- Deployed the application on Railway.

PhishGuard – Phishing Detection System (Hackathon) | Python | Flask | HTML | CSS | JavaScript | Machine Learning

- Collaborated with a team to develop a phishing website detection application during a hackathon.
- Designed and developed a responsive frontend integrated with a Flask backend.
- Connected the frontend with a machine learning model for phishing prediction.
- Used Git for version control and collaborative development.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, HTML5, CSS3, SQL

Frontend: React, Next.js, Tailwind CSS, Framer Motion, Responsive Web Design

Backend: Node.js, Express.js, Flask, FastAPI

Databases: PostgreSQL, SQLite, Redis

Tools & Platforms: Git, GitHub, Docker, Vercel, Railway, Figma

Concepts: REST APIs, JWT Authentication, Microservices, Responsive Design, UI/UX Design, API Integration

EXTRACURRICULAR ACTIVITIES

- Participated in Freshman Firewall CTF, strengthening knowledge of Web Exploitation, OSINT, and web application security. - Delivered a seminar on Redis as a Key-Value Database, covering caching, performance optimization, and modern backend architectures.

ACHIEVEMENTS

- Built and deployed multiple full-stack and frontend web applications using modern technologies. - Experienced in designing responsive user interfaces and converting designs into production-ready applications. - Strong understanding of software development best practices, version control, API integration, and collaborative development workflows.
